

Job Title: Senior Full-Stack AI Engineer

Company: TechNova Solutions

Experience: 3-5 Years

Location: Remote / Hybrid

Role Overview:

We are looking for a Senior Full-Stack AI Engineer to design and deploy AI-driven web applications. You will collaborate with product and ML teams to build robust APIs, intuitive frontend interfaces, and integrate LLM pipelines.

Key Responsibilities:

- Build and maintain modern full-stack web applications using Python (FastAPI/Django) and React / Next.js.
- Integrate Large Language Models (LLMs) using Google Gemini or OpenAI APIs with LangChain / LlamaIndex.
- Architect real-time messaging and bot integrations (Telegram, Discord, Slack webhooks).
- Implement relational and vector databases (PostgreSQL, pgvector, Pinecone).
- Deploy scalable containerized microservices using Docker, Kubernetes, and AWS (ECS, S3).
- Write automated unit tests, CI/CD pipelines, and maintain high code quality.

Requirements & Skills:

- Core Languages: Python, TypeScript / JavaScript
- Frameworks: FastAPI, React / Next.js, Node.js
- AI/ML Tools: Google Gemini API / OpenAI API, Prompt Engineering, RAG (Retrieval-Augmented Generation)
- Databases: PostgreSQL, Redis, Vector DB (Pinecone/ChromaDB)
- DevOps & Cloud: Docker, Git, AWS (or GCP), CI/CD pipelines
- Strong communication, problem-solving, and team collaboration skills.
